ABOUT ME

I'm a novice front-end developer with a strong interest in creating interactive and visually appealing websites. I am ready for quick learning and mastering of new technologies in web development. I'm prepared to contribute to a team and participate in the creation of high-quality and innovative web projects.

ANASTASIIA ALEKSANDROVA,

32 years old

FRONTEND DEVELOPER

COMMERCIAL PROJECTS

Calculator-1

Calculator-2

These are two calculators for a Google site, where information is collected from the client and sent to the manager's email.

- The projects are designed for all types of devices (html, sass);
- Written in pure JavaScript, the smtp.js library is used to send data by email;
- The projects are built using Gulp.

PROJECTS IN TEAM

- **Twitter_step-project** - my part of work is: from markup to fetching data from the backend - search friends, recommended friends, bookmarks, change the theme; styled: posts, profile.
- **Instagram_step-project** - my part of is: Registration page addition; Registration form development with full functionality and stylization
- **Step-Project_Forkio** - my part of work is: Revolutionary Editor, Here is what you get, Fork Subscription Pricing

PROJECTS

My_portfolio - this is my portfolio page, created on react, so that you can get to know me and my work better. There is a feedback form there (data is collected using a hook from the react-hook-form library and sent directly to my email using the emailjs service).

Online store - this is a small version of an online store where you can add products to your favorites, cart, and proceed to checkout.

- React, Redux;
- Sass for styling components;
- snapshot testing for certain components.

Pizza_page - pet-project, a small website where you can add pizza (product), edit it, or delete it.

- React using Vite;
- TypeScript
